

Apros Training Course – General Features + Nuclear Features and optional SCL day

Apros Training Course – Nuclear Features will be organised by VTT on Friday, October 19th, 2018. A prerequisite for attendance is participation in the training course on General Features, i.e. the course held on October 15th – 17th, or previous Apros experience. The optional Semantics Constraint Language (SCL) day is on Thursday, October 18th, 2018. The registration form below covers both the General Features and Nuclear Features, and the optional SCL training day.

Apros is a tool for system-wide modelling and dynamic simulation of industrial processes. With Apros, one can build up a dynamic model of an installation including process, piping, automation and electrical systems, based on P&I diagrams and other engineering data. Apros is globally used, e.g., in process and automation engineering, safety analyses and training systems. For more information, see <http://www.apros.fi/en/>.

The one-day Nuclear Features course is targeted to new users who will be working with nuclear applications. During the course the principles of using the nuclear features of the software are introduced, the available nuclear model libraries are presented, example models are built up in hands-on exercises, and ready-made models are used. The course is supervised by top Apros experts. The course gives sufficient knowledge to join a project team building up and using Apros nuclear simulation models. Note that the participation in the Nuclear Features course day and the receiving of Apros Nuclear evaluation version for use outside of Finland requires a relevant Export License issued by the Ministry of Foreign Affairs of Finland. We will apply for the Export License based on your Registration form. Kindly register in good time! We will inform you upon the decision. See www.nuclearsuppliersgroup.com.

The optional SCL training day offers information and exercises on using the SCL language. SCL is a script language which provides powerful features for configuring model structures, modifying model parameters, running simulation experiments, making queries, etc. It is also possible to only attend the SCL day, if one has at least basic level knowledge in using Apros.

The participants shall use their own laptops (64-bit Windows) in the training. The Apros software will be installed beforehand, and the course fee includes a 1 month evaluation period for the software. In case of any problems to use own laptop, please contact the course coordinator. The lectures and exercises take place in Vuorimiehentie 3 (Otaniemi), Espoo, Finland. Registration takes place in the same building, see number 13 in the map: http://www.vtt.fi/files/vtt/vtt_mapespoo.pdf.

The prices for the training are: General Features + Nuclear Features: 2060 € (+ VAT), optional SCL day 515 € (+ VAT). Please note that the maximum number of participants in the course is 12 persons and the minimum is three (3) participants. The trainees are accepted in the order of registration. Please use the registration form below and include your signature. VTT will send a confirmation message by e-mail.

For more information about the course and assistance in practical arrangements, please do not hesitate to contact us.
