

Apros Training Courses, June 2026

The following Apros Training Courses will be organised by VTT in the beginning of June 2026:

- General Features, Monday June 1st – Wednesday June 3rd
- Simantics Constraint Language (SCL), Thursday June 4th
- Nuclear Features, Friday June 5th.

Apros is a tool for system-wide modelling and dynamic simulation of industrial processes. With Apros, you can build a dynamic model of an installation including process systems, automation systems and electrical systems, using engineering data and P&I diagrams as reference data. Apros is globally used, e.g., in process and automation engineering, safety analyses and training systems. For more information, see <http://www.apros.fi/en/>.

The General Features training course (one day or three days) is targeted for new users, no previous modelling background is required. During the course, the main software features are introduced, and example models are built in hands-on exercises. The course is supervised by Apros top experts. The course gives basic knowledge of the software and adequate skills for further self-learning or participation in modelling projects.

The one-day SCL training course promotes modelling and simulation efficiency by scripts. SCL is a functional programming language used in Simantics-related products (<https://www.simantics.org/>). In Apros-applications SCL can be used e.g., for running simulation experiments, configuring model structures, introducing calculations in User Components, modifying model parameters, and making queries. A prerequisite for attending the SCL training course is basic knowledge of Apros, e.g. the General training course.

The one-day Nuclear Features course is targeted for new users who will be working with nuclear applications. During the course the principles of using the nuclear features of the software are introduced, the available nuclear model libraries are presented, and example models are built in hands-on exercises. A prerequisite for attending the Nuclear Features training course is basic knowledge of Apros, e.g. the General training course.

The participants shall use their own laptops (64-bit Windows, computer mouse needed) in the training. The Apros software will be installed beforehand, and the course fee includes a 1-month evaluation period of the software. In case of any problems to use your own laptop, please contact the course coordinator, a restricted set of training laptops can be arranged.

Note that the **participation in the Nuclear Features** course and the **delivery of an Apros Nuclear evaluation version** for use outside of Finland **requires a relevant Export License** issued by the Ministry of Foreign Affairs of Finland. We will apply for the Export License based on your registration form. **Kindly register in good time!** We will inform you upon the decision by the Ministry.

The training will be held in VTT's premises, address Kivimiehentie 3, Espoo Finland.

The prices for the training are:

- General Features training one day 650 € (+VAT 25.5%); three days 1950 € (+VAT 25.5%),
- SCL training 770 € (+ VAT 25.5%)
- Nuclear Features 650 € (+ VAT 25.5%).

Please note that the maximum number of participants in the course is 8 and the minimum is three (3) participants. The trainees are accepted in the order of registration. Please use the registration form below and include your signature. VTT will send a confirmation message by e-mail.

For more information about the course and assistance in practical arrangements, please do not hesitate to contact us.

Registration

To register, please fill in and sign this registration form and send it to jukka.roppanen@vtt.fi (P.O.Box 1000, FIN-02044 VTT). The deadline of the registration is Friday, May 15th, 2026. **Due to the Export License need for the Nuclear-day, please register earlier if you come outside of Finland.**
